Research areas

Neuropharmacology

Patch-clamp recording of current and voltage in rat brain slice

Research Interests

My research activities focus on the role of cannabinoids in the synaptic pharmacology of many brain regions such as the supraoptic nucleus of the hypothalamus and the dentate gyrus of hippocampus. In addition, we study the interaction between the cannabinoidergic system and the inhibitory GABAergic system in various physiological/pharmacological situations such as seizure, amnesia, anxiety and depression. We also perform behavioral experiments regarding evaluation new compounds which are claimed to produce various pharmacological effects.
